## Direction of Use:

### Supportive dietary dosage:

Suggested dosage is one capsule daily as dietary supplement for large breeds and one tablet for medium breeds every other day. For small breeds if recommended by veterinarian 1-2 per week is enough without crushing or chewing.

### Suggested therapeutic dosage:

Give one soft gel capsule daily for small dogs and 2 tablets for medium and large dogs without crushing or chewing.

### Side Effects & Safety:

When taken orally: There isn't enough reliable information to know if the amounts found in medicine are safe when used for more than 3 months. Negrofit can cause allergic rashes in some animals. It can also cause stomach upset, vomiting, or constipation.

## Special Precautions & Warnings:

### **Pregnancy and breast-feeding:**

Negrofit is **LIKELY UNSAFE**. Negrofit can slow down or stop the uterus from contracting. There isn't enough reliable information to know if Negrofit is safe to use when breast-feeding. Stay on the safe side and avoid to use.

### **Surgery:**

Negrofit might slow blood clotting, reduce blood sugar, and increase sleepiness in some cases. In theory, black seed might increase the risk for bleeding and interfere with blood sugar control and anesthesia during and after surgical procedures.

Negrofit might also cause body to have very high levels of a chemical called serotonin. This can cause severe side effects. Stop using Negrofit at least two weeks before a scheduled surgery.

## Drug interactions:

- In case of chronic use of diabetes, blood pressure, immunosuppressive drugs, antiaggregants and clopidogrel, it is better to consult with your veterinarian to reduce the amount of interactions.
- In case of simultaneous use of ginseng, ginkgo, devil's claw, garlic, psyllium, fish oil, tea grass traditionally or in medicinal products, it is better to consult a veterinarian to reduce the amount of interactions.
- It is better to stop consuming NEGROFIT two weeks before surgery in consultation with a veterinarian.
