

KILLMITE

Red Mite Killer

Killmite is an innovative anti-red mite solution specifically designed to combat red mite infestations in poultry and other birds.

Killmite contains a powerful combination of fluralaner, a proven mite-killing agent, and vitamin E, which helps to support the treatment and overall health and wellbeing of your birds.

Red mites are known to feed on the blood of birds, causing irritation, stress, and in severe cases, anemia and decreased egg production. Killmite effectively kills these pests and protect the birds from harm.

Purpose Of Usage:

- Helps to control and eliminate red mite infestations
- Increases health and productivity of your birds
- Improves bird welfare
- Prevents disease transfer

Main Ingredients:

Fluralaner and Vitamin E

Dosage and Administration:

It is used by mixing 500 ml to 1 lit per 1000 lit of drinking water.

Packaging:

Killmite is conveniently packaged in 1 lit can and 250 cc bottle, ensuring convenient handling and storage.

Storage Condition:

The product must be stored protected from light and heat, dark between 5°C and 25°C.

Target Animals:

Broiler, Layer, Turkey, Ostrich
