

NRG-PASS

NRG BY-PASS

NRG-Pass is a coated fast-acting energy source designed to bypass the rumen and release into the intestine for optimal absorption by dairy cows.

NRG-Pass is aimed at providing cattle with the necessary energy they need to maintain optimal health and productivity.

NRG-Pass by its unique coating ensures that the energy source is delivered directly to the intestine, allowing for maximum absorption and utilization by the cow.

Purpose of Usage:

- Provides an easy and effective way to increase energy levels
- Improves milk production
- Overall herd health
- Improving digestion and nutrient absorption

Main Ingredients:

Monopropylene glycol and Glycerol

Dosage and Administration:

It is used by using 10 to 15 g per cow per day on top of the feed.

Packaging:

NRG-PASS is conveniently packaged in 10 kg bucket and 25 kg bag, ensuring convenient handling and storage.

Storage Condition:

The product must be stored protected from light and heat, dark between 5°C and 25°C.

Target Animals:

Cattle, Dairy
