

When to use?

AQUASHIELD is a fungicide, bactericide, and anti-parasitic product designed to combat external microorganisms and parasites. It's particularly effective against diseases caused by parasitic protozoa like Ichthyophthirius and various fungi, offering treatment alternatives to traditional substances like Malachite green.

What are the benefits?

- ◆ **Broad-Spectrum Antimicrobial Activity:** AQUASHIELD effectively combats a wide range of bacteria, fungi, and parasites, ensuring a disease-free aquatic environment.
- ◆ **Fungal Infection Control:** Targets and eliminates common fungal pathogens including Saprolegnia that affect fish and eggs, reducing mortality and enhancing hatchery success.
- ◆ **Bacterial Disease Management:** Controls bacterial infections such as Columnaris disease and bacterial gill disease, promoting healthier fish populations.
- ◆ **Parasitic Protection:** Acts against external parasites including Ich, reducing stress and improving fish vitality and performance.

What is AQUAVITAL?

AQUASHIELD is a specialized treatment for aquaculture, designed to combat fungal, bacterial, and parasitic infections effectively. Formulated with 50% BRONOPOL, it provides broad-spectrum antimicrobial activity, ensuring a healthy aquatic environment and protecting fish against disease outbreaks. AQUASHIELD is ideal for use in preventive maintenance and during disease outbreaks to safeguard fish health and productivity.

AQUASHIELD

BRONOPOL 50%

Fungicide Bactericide and Anti-Parasitic

AQUASHIELD's unique formulation includes:

AQUASHIELD ingredients play a crucial role in supporting various metabolic processes and improving feed efficiency in aquatic animals.

- ◆ **Bronopol:** treats and remove external harmful microorganisms and parasites. Prevention and treatment of diseases caused by parasitic protozoa such as Ichthyophthirius spp, Trichodina spp, Epistylis spp, Vorticella spp. Kills many kinds of fungi causing diseases in aquatic animals such as Achlya bisexualis, infect for snakehead fingerlings, or Plectosporium oratosquillae in shrimp. Treats scabies in snakehead fish, viscous fungi in anabas, fin rot for pangasius hypophthalmus caused by fungi; Bronopol is the effective substance to replace Malachite green. Treatment of black body for anabas and snakehead fish. Bronopol is used effectively for farms producing shrimp, fingerlings as well as commercial fish.

Dosage and Administration:

Fish: Treat once daily at 20 mg Bronopol per liter (1 ml of AQUASHIELD per 25 liters of water) for 30 minutes, for up to 14 consecutive days.

Fish eggs: Use 50 mg Bronopol per liter (1 ml of AQUASHIELD per 10 liters of water) for 30 minutes.

Packaging:

AQUASHIELD is conveniently packaged in 1 lit bottle and 5 and 10 lit cans, ensuring convenient handling and storage.

Storage Conditions:

To maintain the efficacy of AQUASHIELD, it is crucial to store the product in a cool, dark environment, away from light and heat sources, at a temperature between 5°C and 25°C.
